CALPAIN: Pharmacology and Toxicology of Calcium-Dependent Protease
Edited by: Kevin K. W. Wang, Ph.D., Senior Research Associate of Neuroscience Therapeutics, Parke-Davis Pharmaceutical Research and Adjunct Assistant Professor of Pharmacology, University of Michigan and Po-Wai Yuen, Ph.D., Senior Research Associate of Neuroscience Chemistry, Parke-Davis Pharmaceutical Research

This new edition offers a clear and thorough examination of the most recent results of thirty years of research on calcium-activated-neutral protease (CANP or Calpain). Coverage includes the implications of the recently gained ability to produce functionally active recombinant calpains and the discovery of tissue-specific calpain isoforms. Almost twenty percent of the chapters address the pathophysiological role of calpain in various human disorders such as cerebral ischemia, traumatic brain and spinal cord injury, cataract formation, myocardial infarction, and Alzheimer’s Disease. The resulting research to find more selective calpain inhibitors is also discussed. Through this book, the reader will better understand why the calpain research area is such an exciting and promising one.
